SUMMARY

Computer Science senior (University of Delaware, May 2026) specializing in AI & Robotics with experience building full-stack and data-intensive applications. Proven ability to ship production-ready features, design scalable systems, and transform large datasets into user-facing products. Seeking software engineering roles across full-stack or backend systems.

EDUCATION

University of Delaware | B.S. in Computer Science, Concentration: AI & Robotics | *Expected May 2026*
GPA: 3.10 | Dean's List: Fall 2025
Coursework: Data Structures, Algorithms, Software Engineering, Database Systems, Machine Learning, Parallel Programming, Artificial Intelligence, Data Mining, Computer Vision, Linear Algebra, Discrete Mathematics

SKILLS

Languages: TypeScript/JavaScript, Python, Java, SQL
Frameworks: Next.js, React, FastAPI, Flask
Tools: Supabase, Docker, Git, MongoDB
Familiar: C++, C, R, Postman, Oracle, Ghidra

PROFESSIONAL EXPERIENCE

Software Development Intern | *Axe.ai* | June 2025 – August 2025

- Restored a critical real-time feedback loop by reintegrating toast notifications from a legacy system into a React/Tauri desktop app, eliminating a silent failure in user-facing workflows.
- Designed and built an interactive system visualization tool using React Flow to render live process flows, reducing debugging ambiguity and improving cross-team communication.

PROJECTS

Terris *(Next.js, TypeScript, FastAPI, scikit-learn) — Individual*
Geospatial Risk Platform

- Built and deployed a full-stack app analyzing environmental exposure risk using 4 federal datasets across 49K+ sites.
- Engineered a data pipeline processing 5.2M+ raw records into a high-signal geospatial dataset via rule-based filtering and normalization.
- Designed deterministic scoring APIs with startup-loaded BallTree spatial indexes; shipped an interactive Leaflet map with explainable per-site risk breakdowns and evidence lists.

Foliage *(Next.js, TypeScript, Supabase, FastAPI) — Team Member*
Resume-to-Portfolio Platform

- Architected the ingestion and parsing pipeline that converts uploaded resumes (PDF/DOCX) into structured profile data powering all downstream rendering.
- Implemented authenticated, route-level workflows (upload, template selection, preview, customization) with session-aware redirects and guarded navigation.
- Built a modular template system with live preview, dynamic section rendering, and theme/color controls for rapid portfolio generation from a single data model.

Nutrify *(Flask, JavaScript, HTML, CSS) — Team Member — (Henhacks 2025 Best Use of Gemini API)*
AI Nutrition Analysis

- Built a multimodal nutrition platform using Google Gemini to analyze food from text and image inputs and return comprehensive real-time nutritional profiles.
- Engineered robust JSON parsing with regex extraction and error correction to ensure consistent structured outputs from unpredictable LLM responses.

LEADERSHIP

Academic Chair | *Phi Kappa Sigma* | April 2024 – April 2025

- Mentored 70+ chapter members on academic planning and accountability, contributing to a 15% increase in average chapter GPA over the term.
